

# ENERGY EFFICIENCY PROJECTS - ENERGY WORKS MICHIGAN

## **Rudolf Steiner Lower School (1-3/2010)**

Energy Works Michigan (.org) was awarded a \$3.5M grant by the Michigan Public Service Commission to administer the Michigan Renewable Schools Program, a 2-year project bringing energy efficiency and renewable energy improvements and education to multiple public and private K-12 schools throughout Michigan. The Steiner School is the first school to receive a comprehensive Technical Energy Analysis through this important program. The completed report made recommendations for new windows, wall insulation, and reductions for ventilation and exhaust. A complete lighting energy efficiency project was provided which involves the use of daylight lamps and which offers educational opportunities for students and staff. An analysis of the plumbing system indicated large savings for the installation of low flow flush valves on the water closets.
